# UNIT TESTS

## Database connection method

This testing is for the database connection method and checks for events when the database is available and when it is not available due to connection failure or other technical reasons.

Input	Expected Output
Connection to the Database in the given URL is not available	An error message should be displayed
Connection to the Database at the given URL is available	No error message should be displayed

# HOME

## For those who dare to explore....

Our Swimming Pool facility is a state-of-the-art facility which has not one but three world-class pools.

We have freshwater and saltwater swimming pools along with a separate pool for kids.

## For those who wish to excel...

We have state-of-the-art training professionals who can impart the knowledge of excelling in swimming.

We have trainers who can teach a beginner as well as a professional.

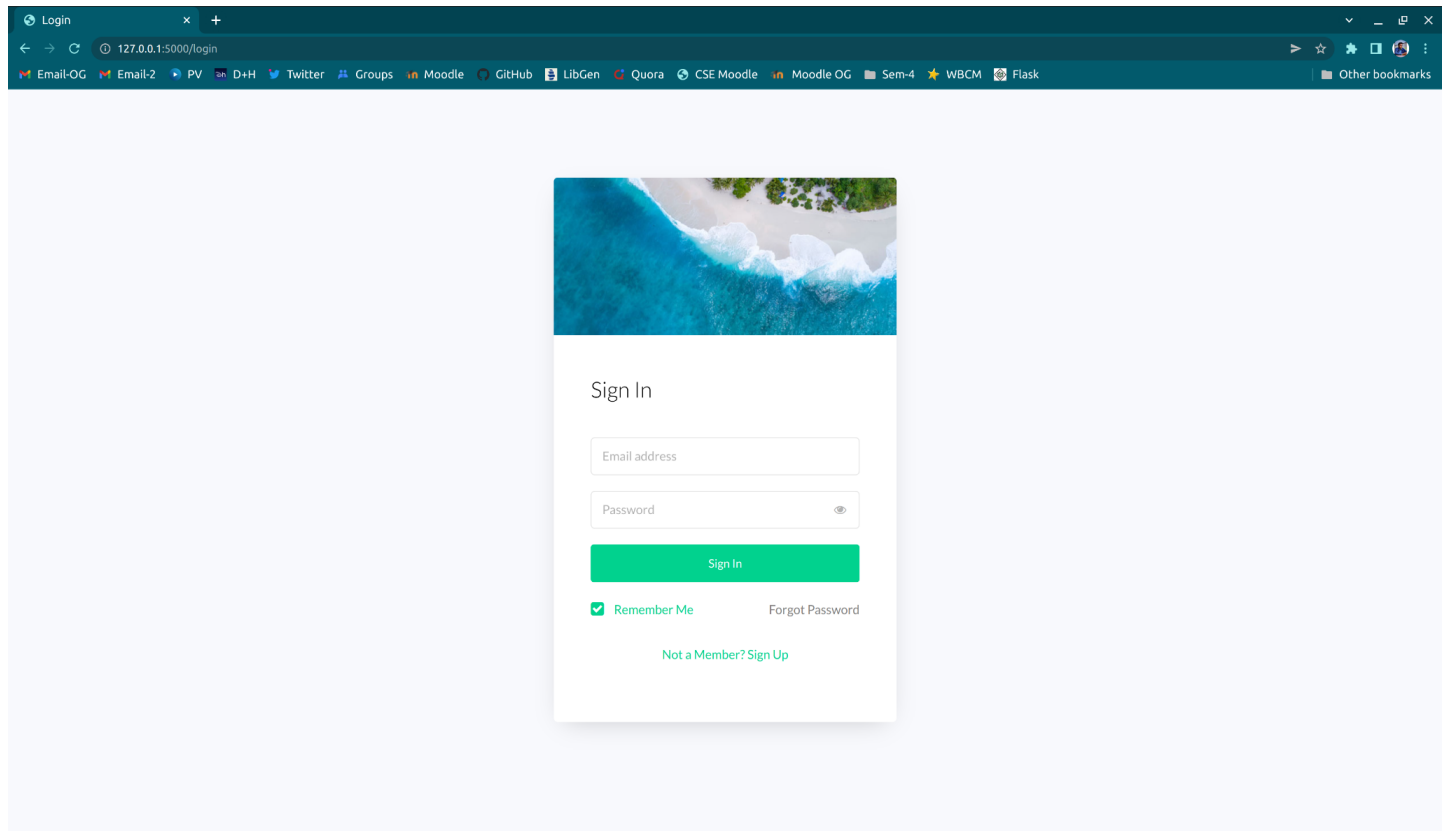

## For those who want to win...

We organise regular competitions for people to participate and prove their excellence.

All these competitions are open to the general public to increase competitiveness.

# LOGIN METHOD

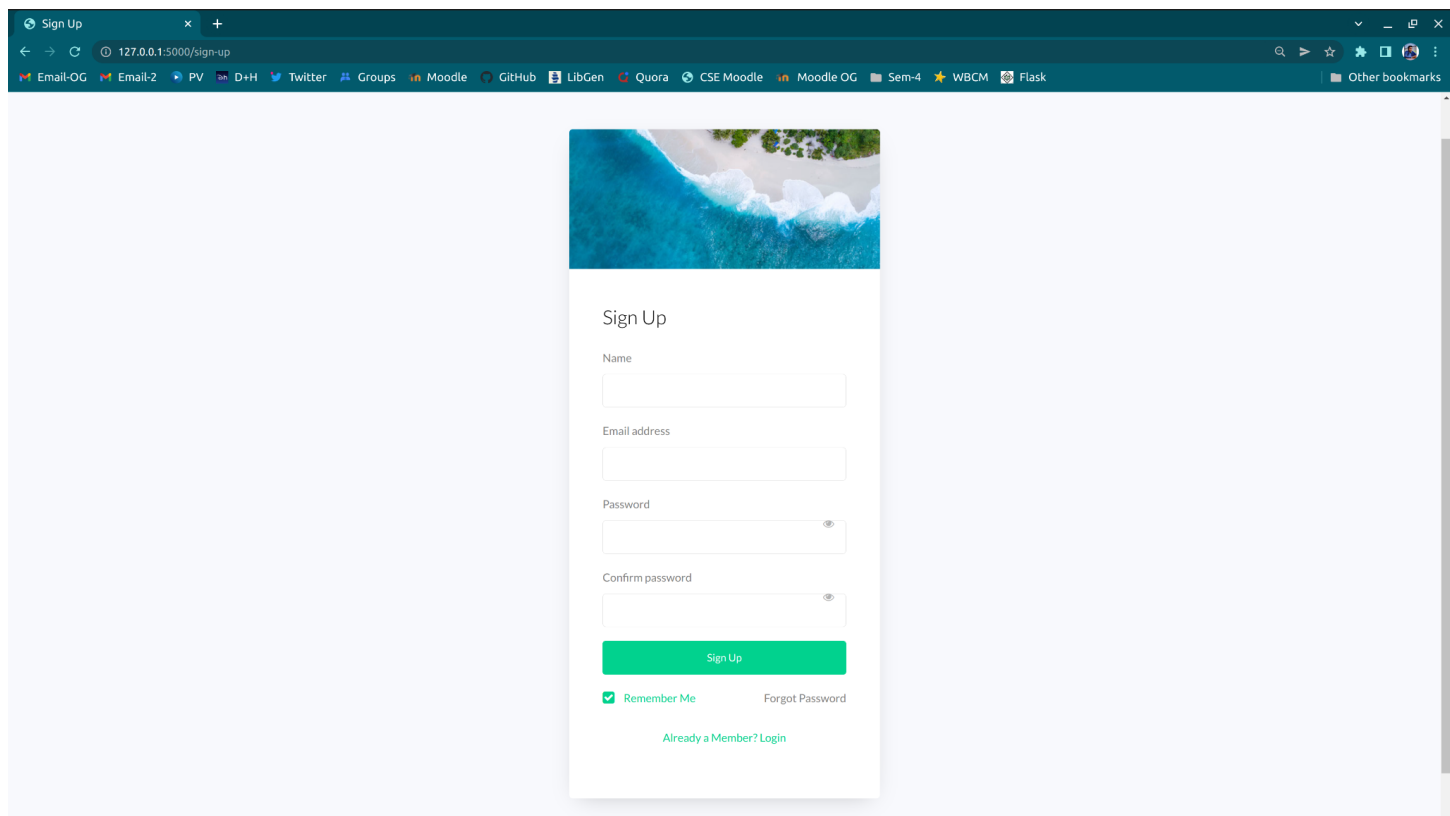

This testing checks the login method for the users of the SPMS in various scenarios.

Users of SPMS can be :

1. Member
2. Non-member
3. Pool Manager
4. Event Manager
5. Pool Management Committee Member
6. Course Coordinator

Input	Expected Output	Actual Output
Entered UserId Does not exist in database	Error Message should be displayed “ Enter Valid UserId “	Error Message Displayed
User account is created, but entered username or password is wrong	Error message should be displayed “Enter correct userId/password”	Error Message is Displayed
User account is created, and entered username or password is correct	No Error message should be displayed and the user should be logged in	No error message displayed and logged in successfully
